FARE

YOUR UMBRELLA

YOUR STATEMENT

Whether sporty or colourful, noble or refined, FARE® continues to offer new highlights for all tastes and all occasions in 2020.

What others consider special, we consider self-evident: As a reliable partner, we are also by your side for every step when designing more unusual umbrellas. Design individual works of art with us that truly catch the eye.

With comprehensive advice, excellent craftsmanship, and exceptional quality products you can be certain that you always make the right choice for your clients. The result – umbrellas that really make a statement!

You can always find all FARE® models quickly, easily, and accurately in our clear **FACTBOOK** – and the same applies to promotional labeling and finishing options. Use the compact **FARE®-STYLEBOOK** which is full of exciting design examples and inspiring novelties as a little appetiser for your clients.

From selecting the model to deliver, you can be sure that everything is in hand with FARE® – whether with or without macarons on the umbrella!

Simply convincing

We believe that an umbrella has to satisfy the demands on functionality, safety and quality to be able to be effective as a long-lasting promotional item. Let yourself be convinced by the solid arguments in favour of a quality umbrella from FARE®.

A trustworthy argument:

Many FARE® products are carefully tested.

TÜV Rheinland Products GmbH subjects selected FARE® umbrella models to strict quality testing. The criteria are:

- User-friendliness
- Shatterproof frame
- Flexibility of rib construction
- Windproofness

After being awarded the TÜV certificate, the production of these umbrellas is subject to an annual inspection of the production facilities by TÜV which therefore guarantees a consistently high product quality. Find out more about the TÜV-Rheinland standard at:

www.certipedia.com/companies/2534

Seal example

Labtech Prüfungsgesellschaft mbH carries out a comprehensive test on suitability for use for specific models, looking at aspects such as wind resistance, lack of hazardous substances, and ease of use. After obtaining the Labtech seal of approval, umbrella models are checked at regular intervals regarding quality aspects. More information regarding Labtech tests for suitability for use can be found at www.labtech-gmbh.de/en/usability.html

Seal example

A windproof argument:

FARE® umbrellas are strong.

Even our less expensive models excel in their high standards of quality and special windproof features for better wind resistance. The majority of FARE® models are equipped with a reliable windproof system. The highly flexible frame for these models turns over when hit by stronger gusts of wind before the ribs break or the cover is torn from its fastening.

A clean argument:

FARE® products are tested for harmful substances.

Labtech and other renowned and accredited testing institutes test our products according to REACH (Registration, Evaluation, Authorisation and Restriction of Chemicals). Alongside conformity with REACH, the relevant legal directives for harmful substances are considered and implemented for our products.

A fair argument:

FARE® products are produced under humane conditions.

Member of amfori, the leading global business association for open and sustainable trade. We participate in amfori BSCI. For more information visit www.amfori.org

Discover more on this subject on page 11.

A watertight argument:

Many FARE® umbrellas are equipped with a high-quality finish.

An even better pearl-off effect or dirt-repellent properties are achieved with complex refinements, depending on the model:

- **Teflon™ fabric protector** is a coating that is water and dirt repellent.
- **Nanotechnology** gives the umbrella cover a minutely rough structure which prevents dirt and water from sticking to the fabric and they simply pearl right off – this is the so-called lotus effect. This coating is absolutely sealed and promotes a particularly long-lasting product life.

An award-winning argument:

FARE® umbrellas have won several renowned awards.

Red Dot Design Award

- This is the 11th time that a FARE® product has been recognised by the jury of 40 experts with the Red Dot Award: Product Design – most recently in 2019 with its **Mini umbrella FiligRain Only95 (art. 5062)** and its **AC alu golf umbrella FARE®-Precious (art. 7399)** umbrella.

Promotional Gift Award

- The **AC midsize umbrella FARE®-Switch (art. 7905)** was selected winner of the 2018 Promotional Gift Award in the premium product category.

PSI Sustainability Award

- In 2019, the **AC mid-size regular umbrella ÖkoBrella (art. 7379)** took 3rd place in the "Sustainable Product" category, which the **AOC mini pocket umbrella ÖkoBrella (art. 5429)** had already won in 2017.

A protective cover – for people and the environment

Everybody talks about sustainability and yet for many this is only an abstract concept. Nevertheless, this principle, which originated in forest management, is as simple as it is sensible: Anyone who only cuts down as many trees as can regrow will ensure consistent continuation of the entire forest – and with this – a good, long-term basis of life for future generations.

Packaging made of compostable film

Hangtag made of recycled paper and jute cord

At FARE® we understand sustainability as a combination of social, economic and ecological fields of activity for our company, which are integrated into our core business. We want to strengthen our customer relations and tie our employees to our establishment in the long-term.

♥ Social

The amfori Business Social Compliance Initiative (amfori BSCI) is a code of conduct based on the international working standards of the ILO (International Labour Organization), which supports globally active companies in building up ethical supply chains and monitors social standards worldwide as well as optimising them continuously.

FARE® is a member of amfori BSCI. Our production sites for the manufacture of umbrellas have been audited according to amfori BSCI requirements and all have a valid audit result.

All amfori BSCI participants agree to the Code of Conduct (CoC) and undertake to comply with it. The amfori BSCI Code of Conduct comprises of the following principles as just some examples:

- Appropriate remuneration
- Safety at work
- No forced labour
- No discrimination
- Reasonable working hours
- No child labour

amfori 
Trade with purpose

Member of amfori, the leading global business association for open and sustainable trade.
We participate in amfori BSCI. For more information visit www.amfori.org

Sustainability and social responsibility does not begin in your own company, or with your own products or employees. We therefore also support many initiatives and associations, which stand up for underprivileged people through their projects.

♥ Economy

Our long-term supplier and business relations contributed to the creation of modern manufacturing sites, where our products are made today. This ensures that our suppliers are reliable and sustainable partners.

♥ Ecology

At FARE® we ensure environmentally-friendly working processes through measures such as CO₂-neutral parcel dispatch, bundling production orders and avoiding single item consignments as well as reducing paper by utilising digital documents and much more.

Since FARE® brought the first bamboo umbrella onto the market in 2011, the ÖkoBrella range has continuously grown – from the manually opened **pocket umbrella (art. 5095)** to the award-winning **AOC mini pocket umbrella (art. 5429)** and the good value **AC regular umbrella (Art. 1122)** to the prize-winning **AC midsize bamboo umbrella (art. 7379)**. ÖkoBrella products are suitable for sustainable communications in all sectors and for every budget. This also applies to the new **mini pocket umbrella ÖkoBrella Shopping (art. 9159)**: Its sleeve is also a practical shoulder bag, meaning there is no need for plastic bags! The bag and cover of the umbrella also consist of polyester pongee made from recycled plastics certified according to STANDARD 100 by OEKO-TEX®.

Art. 5429

Art. 7379

Every drop counts

Thinking progressively is good – but acting progressively makes the difference. We don't just consider existing production processes as part of our sustainability strategy, but also look at new, progressive technologies.

**Due to waterSAVE
cover material: Total
water saved per
umbrella is almost 6 l***

* This is calculated based on water savings of 2 million litres for processing around 300,000 m² of fabric, from which around 350,000 umbrellas can be made.

When on the search for new, more sustainable production options, we discovered a revolutionary dyeing process which dramatically reduces both consumption of valuable raw materials as well as energy consumption and environmental impact with hazardous matter. We also use this process for our new waterSAVE cover material, which is now used for the popular STYLE range, the Colorline umbrellas, and the new FARE®-Steel for the first time.

» Reducing sludge
production by

98%

» Reducing energy
consumption by up to

70%

The yarn made from recycled plastic for our waterSAVE cover material is already fully dyed during the production process. In this case, no water is required whatsoever. Far fewer chemicals are used and the drying time in energy-consuming machines is a thing of the past.

The typical dyeing process for woven fabrics requires large quantities of fresh water, chemicals, and energy. As the new process is a "dry" process, there is no purification and treatment of the water beforehand at all, saving a lot of energy.

» Reducing CO₂
emissions by more

60%

Excitingly designed

An umbrella offers a huge variety of refinement possibilities. On the following four pages we show you the different printing methods and their areas of application.

Screen printing

The technique of choice and a proven track record. Up to eight fresh colours may be used for logos, slogans, funny texts or images. The best possible quality and a long lifespan are always at the forefront.

Dual printing

In order to ensure strong brightness and colours true to the original when using coloured fabric, either dual printing is required or a white undercoat is applied underneath the colour. The opacity of the applied colour is then increased considerably.

Printing colour, white: This requires a dual printing process that is calculated like two-colour printing. Preliminary costs for film, set up and screen costs are only charged once per logo.

Coloured printing: In this case, we work with a white undercoat. It is slightly smaller than the coloured motif to ensure that no white is visible. Costs are incurred for the additional print colour and the corresponding pre-printing costs.

Pricing tip: A colour print on white umbrellas is cheaper, because a white undercoat is not required. The white undercoat is also not needed on all covers in the colours silver, gold and black because they have good coverage even without the white undercoat.

White single print

White dual print

Coloured screen print without white undercoat

Coloured screen print with white undercoat

Colormagic®

An exceptional way to turn dreary grey, rainy days into a happy event is with Colormagic® printing. As soon as the surface gets wet, the white Colormagic® print becomes transparent and the underlying colour becomes visible.

Screen printing without Colormagic® overprint

Screen printing with Colormagic® overprint when dry

Screen printing with Colormagic® overprint when wet

Transfer printing

This means that photo-realistic motifs or motifs with very fine screens and gradations can be perfectly implemented with transfer printing.

With this technique, the motif is printed onto a carrier film first and transferred onto the cover by means of heat. Neon or metallic colours can be used here on request.

Laser stickers

Available in two-colours and in many different shapes and sizes. Ideal for individual personalisation. Simple, flexible and cost-effective. Very good adhesion properties. **Labelling options:** Push-buttons (art. 1083 and art. 1122), umbrella handles and bags.

Laser engraving

Discreet and elegant for exclusive demands. Extremely sharp contours and delicate representation of the tiniest details.

Labelling options: Umbrella handles and microfiber towels.

Doming

3D effect in vivid colours for a particularly demanding, photo-realistic result. High-quality finished surface, extremely durable. **Labelling options:** Push-buttons (art. 1083 and art. 1122), umbrella handles and bags.

EVA laser engraving

Particularly vivid three-dimensional effect and pleasant to hold. Appropriate umbrellas with soft handles suitable for laser engraving are indicated accordingly. **Labelling options:** Umbrella handles.

Refinement of transparent covers

Screen printing of up to four colours is possible thanks to the high-quality polyethylene material on our **AC regular umbrella FARE®-Pure (art. 7112)** and our **AC golf umbrella FARE®-Pure (art. 2333)**. Please note that a maximum of two panels can be refined, or four upon request. An print-free panel must always be between two printed panels in this case.

Customised audio logo

Alongside sight, hearing is the sense that takes in the most information. You can take advantage of this opportunity for experience-focused communication with the new **AC Midsize regular umbrella FARE®-Sound (art. 7799)**. It is delivered by default with an excerpt from the classic "Singin' in the Rain", however, a jingle, audio logo or sound icon can be used that plays every time the umbrella is opened.

Variable filling

With the **mini pocket umbrella FARE®-Fillit (art. 5052)** your options are only limited by your ideas and the size of the handle! Whether you fill it with small products, a voucher, or have a sweet thank you, we'd be delighted to help!

Blind embossing

Subtle tone-in-tone refinement is possible using blind embossing in a maximum size of 100 × 70 mm on FARE® microfiber towels.

Projection

It is now possible to present an image, logo or claim in the dark. The handle of the **oversize mini umbrella FARE®-Shine (art. 5077)** has a built-in light that projects an image. The required motif can be implemented with a maximum of seven full colours without screen.

Individual & versatile

With a little courage and by advance planning, individual customisations can be designed that are completely tailor-made to match the customer's Corporate Identity. It is worth it: Many of these unique designs have now developed into real cult items.

Cover colours and cover fabrics

Do you like one of the umbrellas from the stock range, but the entire cover should have a different colour? Should one or more wedges be coloured? Your ideas can be realised very well with our choice of 18 standard colours (see article 5460). We can also produce the cover fabric in your custom colour.

Wetlook

The umbrellas appear neutral at first glance. A hidden design appears when wet thanks to the special printing technique. Individual wetlook motifs are produced as customisations and are possible on all FARE® models.

All-over printing

Very popular variants for customisations are motifs that extend over several panels or display a photo realistic image over the entire cover. The panels are cut, sewn and fixed to the frame from material that is pre printed edge to edge. Small fit inaccuracies can often not be avoided – but the overall look is impressive.

All-over printing in Europe

The perfect alternative for all-over printing of your chosen motif in small quantities! From a quantity of just 48 pieces and a delivery time of around four weeks after approval, individual umbrellas can be realised in two variants at an "all-inclusive price" (without initial costs):

1115UK: With a seamless cover and therefore no laymark differences. The edge of the cover is always bordered with black piping, which means the seam may become slightly waved. **1115UKA:** It has eight sewn panels, which means that Laymark differences of a couple of millimetre range usually cannot be avoided. The advantages are printing up to the edge and the perfect fit of the cover on the frame.

Further technical information on these two models can be found on page 87.

Unique designs

The special production of a custom-made advertising umbrella that perfectly characterises your company offers practically unlimited creative freedom. Here are a few examples from our "umbrella building kit":

Cover material & colour

The premium polyester pongee is available in 18 standard colours, depending on the model. The cover can also be fully dyed to your specification on request.

Coating & finishing

Achieve special effects with colour, metallic or reflective coatings. Finishings such as the Teflon™ fabric protector improve the pearl-off effect and protect against dirt.

Opening mechanism

Whether with a manual opener with safety runner, automatic opening or mini umbrella with auto open/close function for convenient opening and closing at the push of a button – you can choose your favourite.

Refinement

Make a statement e.g. with your very own design of woven label, reflecting elements or an individual carrying loop made from plastic.

Umbrella frame

By choosing the frame, you not only determine the windproofness and resistance to turning inside out. The combination with coloured fiberglass elements allows surprising effects to be created.

Umbrella shaft

Alongside wood and steel in different variants e.g. galvanised black or with a coloured plastic coating, aluminium or fiberglass are also available to choose.

Handle types & handle material

You determine the shape and material to suit your tastes or select special individual shapes, such as the existing product design like a tool handle.

Sleeve & packaging

Design the matching sleeve and use the fully printed box and gift packaging for the perfect presentation.

Varied design possibilities

FARE® umbrellas offer plenty of space for any advertising message, from handle to tip. Many renowned companies have already used it and have implemented their ideas with us. And what can we do for you?

With coloured trendy reflective coating

Examples for your promotional labelling

Screen printing – white double print or single print in black, silver or gold

Double print, white / white undercoat

A white undercoat is required in most cases to guarantee brilliant colours and good contrasts. Visible white requires a double print. The coverage and brightness of the applied colour is then increased considerably. The result is a vivid printed image.

❶ 1-colour print motif, white

This requires a dual printing process (calculated like 2-colour printing) – Preliminary costs for film, set up and screen costs are only charged once per logo.

Exception

Printing on white umbrellas does not require the white undercoat. The colours silver, gold and black also have good coverage even without the white undercoat.

❷ 1-colour print motif, black

Screen printing – Coloured print motif with white undercoat or visible white

See p. 14 for more information on double print and the white undercoat

Coloured prints

In this case, we work with a **white undercoat**. It is slightly smaller than the coloured motif to ensure that no white is visible. Costs are incurred for an additional print colour with the corresponding pre-printing costs for this white undercoat.

❸ 1-colour print motif (with white undercoat)

❹ 2-colour print motif with visible white (with white double print)

Doming – 1- or multi-colour

Doming produces vivid colours and creates a particularly demanding, photo-realistic result with its 3D effect. The high-quality finished surface is extremely durable.

Labelling option: on umbrella handles as well as bags (and on push-button Art. 1083 and Art. 1122)

Laser stickers

Laser stickers are simple, flexible and cost-effective. They are perfect for individual personalisation (e.g. labelling with individual names). Available in many different sizes and shapes.

Labelling option: on umbrella handles as well as bags (and on push-button Art. 1083 and Art. 1122)
